

Network Access & Bandwidth Controller (NAV-500)

Intelligent hotspot gateway for complete network control.

NAV-500 is an all-in-one smart controller designed to centrally manage wired and wireless networks. It prevents unauthorized access, tracks real-time activity, and optimizes internet speed for all users.

All-in-One Management

Combines a Wi-Fi controller, hotspot gateway, VPN server, firewall, and load balancer into a single, powerful box.

Smart Billing & Access

Includes flexible billing plans, voucher integration, and multiple login methods like Social Media and SMS OTP for easy guest access.

Security & Compliance

Keeps your network safe with user isolation, MAC blacklisting, and web logging that meets government reporting regulations.

Performance

500+

Concurrent Users

Operating Temp

50°C

Max Heat Tolerance

With over years of experience, we have worked closely in the wireless space to solve problems where we see them. We evolve, innovate, and adapt to craft newer products that make your life easier. Simplifying connectivity is a principle we hold, and we plan on bringing it to everyone, everywhere.

Network Access & Bandwidth Controller (NAV-500)

Product Overview

NAV-500 is an all-in-one smart device designed to manage your network. It combines multiple functions—including a Wi-Fi controller, billing system, and internet traffic manager—into a single box.

It helps network administrators centrally control both wired and wireless networks. It prevents unauthorized access, tracks user activity in real-time, and manages internet speed (bandwidth) efficiently.

Key Capabilities:

- **All-in-One Solution:** Acts as a hotspot gateway, firewall, web server, VPN server, and load balancer.
- **User Capacity:** The NAV-500 is built to handle up to 500 active users at the same time.
- **Reliability:** It runs on a stable Linux platform to ensure your network stays online and fast.
- **Flexible Deployment:** You can use it as a standalone device or connect it with WiOS OSS/BSS systems.

Perfect For:

- Hotels & Resorts
- Airports & Transport Hubs
- Universities & Schools
- Healthcare Facilities
- Public Places & Hotzones

Key Features

High-Performance Networking

- **Multi-WAN:** Connect multiple internet lines with load balancing for better speed.
- **Gigabit Speed:** Includes Gigabit LAN and WAN ports for fast data transfer.
- **Routing:** Supports static, dynamic, and group-based routing.

Bandwidth Control

- **Fair Usage Policy:** Prevents single users from hogging all the speed.
- **Smart Limits:** Set time and data quotas for different user groups.
- **Traffic Management:** Prioritize bandwidth for important tasks or users.

Flexible Billing & PMS

- **Payment Options:** Built-in billing with support for vouchers and online payment gateways.
- **Virtual PMS:** Acts as a Property Management System for hotels to manage guest access easily.
- **Plans:** Create tiered billing plans based on time or data usage.

Reporting & Analytics

- **Real-Time Data:** Monitor online users and track live network activity.
- **Business Insights:** Generate detailed revenue, usage, and social media profile reports.
- **Automation:** Receive automated reports via email for easy tracking.

Smart User Login

- **Easy Access:** Supports login via Social Media and Two-Factor (SMS/OTP) authentication.
- **Enterprise Login:** Integrates with G-Suite and LDAP/AD for office environments.
- **Captive Portals:** Use customizable templates for branded login pages.

A fanless, silent controller designed for 500 concurrent users. It offers comprehensive reporting, automated email alerts, and a stable Linux platform—perfect for hotels, universities, and public venues.

Advanced Capabilities

Manage Multiple Locations: With the NAV-500, you can create and manage multiple hotspots. This allows you to run Wi-Fi operations at several different locations simultaneously using just one device.

Virtual PMS (Hotel Features): If you don't have a dedicated Property Management System (PMS), the NAV-500 acts as a Virtual PMS. It delivers a professional guest experience without the extra cost of buying separate software.

Google G-Suite & LDAP Integration: Simplifies logins by integrating with G-Suite or LDAP/AD. Users can use their existing email or office passwords to access the Wi-Fi, meaning they don't need to remember a new password.

The Automatic Cloud Sync System: It automatically syncs data and updates software via the cloud, increasing productivity and ensuring your system is always up to date.

Technical Specification

Category	Specification Details
Model Name	UniBox NAV-500
Ethernet Ports	6 x Gigabit Ports (RJ-45, 10/100/1000 base T/Tx)
Optional Ports	2 x SFP+ 10G ports (Optional)
Connectivity	1 Console Port, 2 USB Ports
Throughput	860 Mbps (with authentication), 921 Mbps (no authentication)
Concurrent Users	Supports 500 active sessions
Processor	Intel chipset
Power	Input: 110-240V AC
Dimensions	482mm x 280mm x 44mm (Rack-mountable)
Weight	Approx. 4kgs (8.8lbs)
Environment	Operating Temp: 5°C to 50°C
Design	Fanless design (Silent operation)
