

RIZONN · POWERING THE CONNECTED FUTURE

RIZONN DCIM

Data Center Infrastructure Management Platform.

A hybrid, carrier-grade and commercial-grade platform delivering end-to-end visibility and control across every layer of the data center — built around a live Digital Twin at its core.

ARCHITECTURE Hybrid · Carrier-Grade	CORE ENGINE Digital Twin + AI/ML	VISUALIZATION 2D · 3D · 4D · 5D	CERTIFIED ISO 27001/30111 · FIPS 140-3

01 — PLATFORM PHILOSOPHY

A holistic management philosophy — unifying every operational layer.

RIZONN DCIM dissolves the silos between Facilities, MEP, OT, IoT and IT — orchestrating them as a single, intelligent ecosystem driven by AI and machine learning, with a multi-layer Digital Twin tailored to every department and business unit.

01

Facilities, OT & MEP Systems

Spanning Intelligent PDUs (iPDU), Power Access Control (PAC), Fire Alarm Systems (FAS), Access Control (ACS), Water Leak Detection (WLD), temperature & humidity sensors, LT panels and advanced metering — with multi-layer Digital Twin views tailored per department.

TRANSFORMER

02

Non-IT, OT & IoT Ecosystems

Ensures every connected device and operational sensor is monitored, tracked and managed within a single pane of glass — a true convergence of operational technology and the Internet of Things across the facility.

SENSORS

CONTROLLERS

GATEWAYS

03 • OPTIONAL

IT Infrastructure Integration

Incorporates servers, storage arrays, network switches and virtual platforms to bridge the traditional divide between IT and Facilities. Intelligent structured cabling is handled seamlessly with full asset inventory.

VIRTUAL

CABLING

| A data center that doesn't just run — it thrives.

02 — INTELLIGENT CORE

Digital Twin, AI + ML, SOPs & 2D / 3D / 4D / 5D visualization.

A locally-resident AI and machine-learning framework orchestrates infrastructure as one cohesive, intelligent whole — not a collection of components monitored in isolation.

**A · CORE**

Digital Twin at the Core

A live, multi-layer Digital Twin of the data center — including digital pre-plan build design, infrastructure maps and real-time heatmaps — delivers immersive 3D visualization and intuitive situational awareness across geographically dispersed environments.

**B · INTELLIGENCE**

Local AI + ML Framework

Advanced, locally in-built AI and ML modeling drives capacity planning, forecasting of impacts, resource predictions and anomaly detection — keeping every model and data point inside the customer's secure perimeter.

**C · VISUALIZATION**

2D / 3D / 4D / 5D Maps

Rendering of infrastructure across 2D, 3D, 4D and 5D maps, real-time heatmaps for the data center and rackspace, and dynamic charting with near-low-latency data visualization — every layer the operator needs.

**D · OPERATIONS**

SOPs & Manager of Managers

Codified Standard Operating Procedures with role-based access, SLA management, an event console with thresholds and alarms, ticketing and notifications — overseen by a powerful 'Manager of Managers' interface for distributed sites.

Proactive management — not reactive firefighting.

03 — POWER & COOLING INTELLIGENCE

Real-time PUE & thermal intelligence — every watt, working harder.

RIZONN DCIM automatically harvests and consolidates energy data from IT loads, cooling systems, lighting and ancillary infrastructure — PUE gauges and trend visualizations are pre-configured from day one, with no complex setup and no waiting period.

REALTIME PUE RATING

Power Usage Effectiveness

Pre-configured gauges for every data center in the portfolio — track fluctuations, benchmark performance and pinpoint inefficiencies with surgical precision. Target ≤ 1.40 · industry avg 1.58.

12-MONTH TREND

PUE Trend & Energy Mix

Every energy touchpoint — IT, cooling, lighting, ancillary — captured and unified into a single, holistic view of facility consumption, trending down toward target.

REALTIME HEATMAP

Rackspace Thermal Map

COVERAGE

Spot emerging thermal trends and flag anomalies before they escalate — proactive cooling, not reactive firefighting. Every rack is continuously scored against safe thermal envelopes, with automatic escalation to the SOP and alarm engine.

ANCILLARY

04 — BMS, IOT & NATIVE PROTOCOLS

Native integration with BMS, IoT — every industry IT, MEP & IoT protocol.

A controller layer with IP/TCP, BACnet and MQTT integration, plus I/O expansion cards for AI/AO/DI/DO/NO-NC, Modbus and BACnet — extended with RF, HF, BLE, ZigBee, LiDAR and LoRa for the long tail of the sensor fabric.

3RD-PARTY SYSTEMS

Manager of Managers

iPDU · PAC · FAS · ACS · Metering · iBMS · ITAM · ITSM · LT Panels — interfaced through standard protocols and surfaced via a single 'Manager of Managers' pane across geographically dispersed sites.

Native by design — no supplementary connector modules required.

05 — SECURITY, CERTIFICATIONS & REPORTS

Certified by design. Reports, out-of-the-box.

Innate security mechanisms remove the need for supplementary modules — AES 256-bit, RSA 4096-bit, anti-malware/virus/DDoS/spyware/rootkit defenses, MIMA/MITM and MITRE coverage, plus ISO 30111 vulnerability assessment, penetration testing and remediation.

COMPLIANCE & CERTIFICATIONS

INFORMATION SECURITY

ISO 27001

ISMS controls for the platform & operations.

APPLICATION SECURITY

ISO 27034

Secure software development lifecycle.

VULNERABILITY HANDLING

ISO 30111

VAPT & remediation discipline.

CRYPTOGRAPHIC MODULES

FIPS 140-3

AES 256 · RSA 4096 · validated crypto.
